

## Lock Ring Support Stand

RIMEX designed the Lock Ring Support Stand (LRSS) with SAFETY in mind. The support stand catches single-piece lock rings in the event they spring off wheels or rims during mounting or dismounting operations.

### LRSS features:

- Will not dislodge from wheel or rim base when catching lock ring
- Once installed, LRSS can remain in wheel/rim during tyre change operations
- Acts as a support eliminating need for personnel to physically hold lock ring during installation
- Single design fits wheels and rims from 45" to 63" diameters
- Configurable adapters available for fitment to various wheel/rim designs
- Robust design weighing 19 lbs / 8.6 kg, 20% lighter than previous RIMEX LRSS models
- Manually telescoping height with finite adjustments
- Hand adjustable tension control

### Adapters

The LRSS is supplied with adapters (4 per unit) to fit the most common 57" and 63" RIMEX gutter profiles. These adapters may also fit other manufacturers' wheels, but are designed specifically for RIMEX products. For fitment to other manufacturers' products or for uncommon gutter profiles, please use the supplied Adapter Gauges to select the best fitting adapter available. These adapters are available to order from your local RIMEX location.
